YASEMIN KARAKAYA SCIENCE AND ART CENTER

Technical Skills

- Java
- C++
- Python/ Django
- JavaScript
- Node.js/ Express.js
- Vue.js
- MongoDB
- MySQL
- HTML/ CSS

Experience

- Currently employed as a Backend Developer Intern at AppNava, focusing on notification systems and decision tree models in Python Django for one month.
- During a two-month internship at Datateam Information Technologies as a Full-Stack Developer Intern, a productivity app was developed using the MEVN stack, which includes a countdown timer, a blog page, and a to-do list.
- Created a personal website using HTML and CSS, which has detailed information about my projects: https://cenkerakan.github.io/PortfolioPage/index.html
- Developed a desktop app in Java called Register++ that automates the section change process in educational institutions by a group of five.
- Contributed to the Game Circle Global Game Jam and developed a two-dimensional endless runner game using Unity by a group of six.
- Developed a wind tunnel simulation using Unreal Engine 5 in the Infinia Software Development Hackathon by a team of two and can make it to the final round.
